Acknowledge

As we understand that the eProject is a step-by-step learning environment that closely simulates the class-room and Lab based learning environment into actual implementation. Beside serveral mistakes we had made in the project, we hope to have more oppotunities to widen our knownledge in web developing world.

We would like to send a great thank to our professor and others student for the addorable supports during the time in project.

We also thank you so much for your infomation and the “Astronomy” project from India APTECH to help us get more reality experience in this project. Since we have gained more experience from this project, we will not stop learning any thing as much as we can to be more successful in the future.

Your Sincerely,

Team Group 04.

Synopsis

The Objective of this program is to give a sample project to work on real life projects. These applications help you build a larger more robust application.

The objective is not to teach you JavaScript/Dreamweaver but to provide you with a real life scenario and help you create basic applications using the tools.

You can revise the chapters before you start with the project.

This project is meant for students who have completed the module of HTML5. These programs should be done in the Lab sessions with assistance of the faculty if required.

It is very essential that a student has a clear understanding of the subject. Students should go through the project and solve the assignments as per requirements given.

Kindly get back to eProjects Team in case of any doubts regarding the application or its objectives.

Design Plan: Astronomy	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date: 10-04-2021	Version 1.0	Page No: 1 of 20

Problem Definition

Humans have long gazed toward the heavens, searching to put meaning and order to the universe around them. Although the movement of constellations — patterns imprinted on the night sky — were the easiest to track, other celestial events such as eclipses and the motion of planets were also charted and predicted.

Astronomy is the study of the sun, moon, stars, planets, comets, gas, galaxies, gas, dust and other non-Earthly bodies and phenomena.

The website is supposed to provide user friendly environment and navigation. The important menu must be stated in the top section of the webpage. Also a decent look out and color combination is expected.

The website is to be developed for the Windows Platform using HTML5, JavaScript and Geolocation. The site should work well in all leading browsers including Chrome, IE, Firefox etc.

The Web site is to be created based on the following requirements.

1. The Home page:

About the description/images about various planets should be provided. If user clicks on the same, navigational link must be available.

2. The About page:

There should be categories providing details about big bang theory, evolution of earth etc

3. Detail Page (Mars, Venus, Comet...)

	Prepared by (Student)	Approved by (Faculty)

Date		

Design Plan: Astronomy	Document Name: Problem Definition	SWD/Form No.01/PD/Ver1.0
Effective Date: 10-04-2021	Version 1.0	Page No: 2 of 20

The site should also list and explain various planets available as well as details about them as

- a. When discovered
 - b. Size
 - c. Atmosphere there
 - d. Distance from sun and earth
 - e. Other available important details about them.
 - f. There should be information on constellations as what is it/how it is formed and various constellations.
 - g. There should also be a section on comet giving information related.
4. Blog Page

Also include a section which will provide details on various latest developments in the field of astronomy related to planets and stars.

5. Google Maps:

List of Few top Observatories with details and location displayed using GeoLocation API (eg. GoogleMaps).

6. Notes:

Also each link must be properly hyperlinked; images must be used wherever necessary.

Effective Date: 10-04-2021	Version 1.0	Page No: 1 of 20

Customer Requirements Specifications

User:

input:

- Navigational Link
- Description link (Hyperlink link)
- Image link

Process:

- Hyperlink to each page detail

Output:

- The About page: display details about bigbang theory, evolution on earth
- The Detail page: display the image and information about which planet user want to find out(discovered time, size, atmosphere there, distance from sun and earth, another important information, etc.....)
- The Blog page: display details on various latest developments in the field of astronomy related to planets and stars
- Google Maps: List of Few top Observatories with details and location displayed using GeoLocation API (eg. GoogleMaps)

	Prepared by (Student)	Approved by (Faculty)
	Project Group No: 01	LE THANH NHAN

Effective Date: 10-04-2021	Version 1.0	Page No: 2 of 20

Webmaster:

input:

- Input username
- Input password

Process:

- Validating username
- Validating password

Output:

- Guarantee logging successful

	Prepared by (Student)	Approved by (Faculty)
	Project Group No: 01	LE THANH NHAN

Effective Date: 10-04-2021	Version 1.0	Page No: 3 of 20

Hardware / software requirement:

Software:

- A minimum computer system that will help you access all the tools in the courses is a Pentium 166 or better
- 64 Megabytes of RAM or better

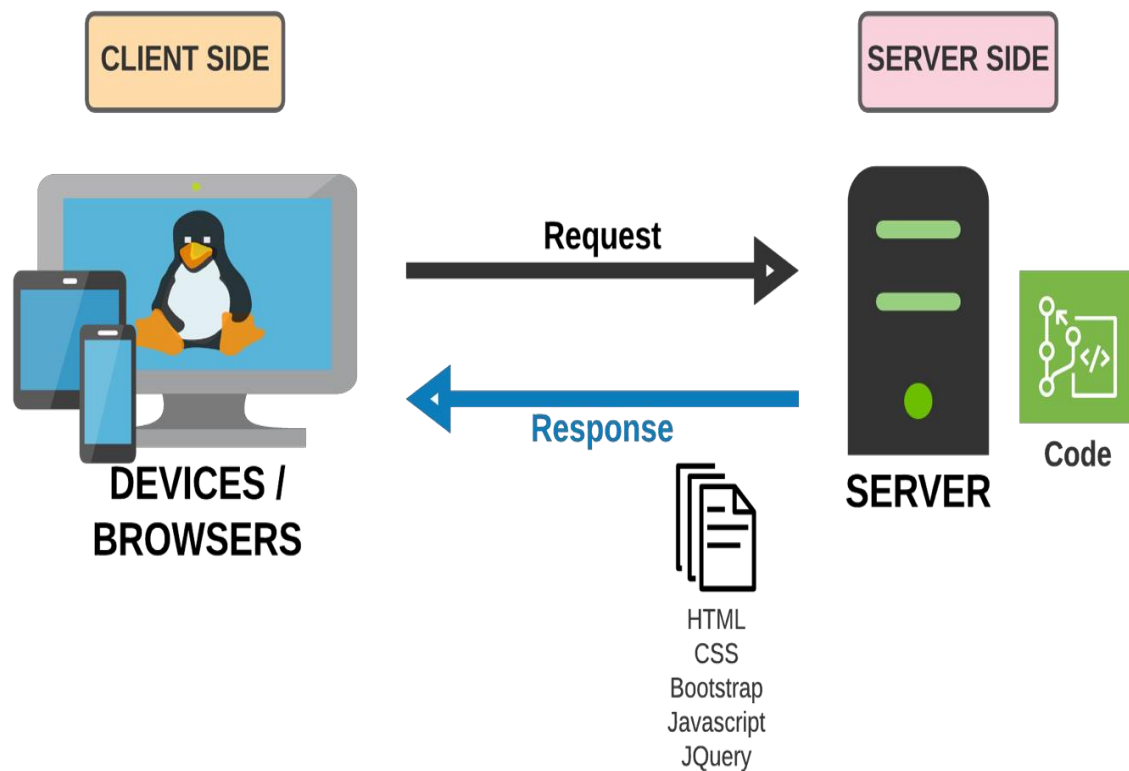

Hardware:

- Notepad/HTML editor
- Dreamweaver
- IE 5.0/ Netscape 6.0

Design Plan: Astronomy	Document Name: Final checklist	SWD/Form No.07/FC/Ver1.0
Effective Date: 10-04-2021	Version 1.0	Page No: 1 of 20

Final checklist

Sr.No	Aspected Tested	Suggestion/ Remarks
1	Are all the users able to view the images and links?	
2	Have all the views, modules and controllers been properly integrated and is the site function as a single page application?	
3	Are the GUI content devoid of spelling mistakes?	
4	Is the application user-friendly?	
5	Is the Website launching correctly in all popular browsers?	
6	Are all the forms validated with proper criteria?	
7	Do all text links lead to the appropriate website?	
8	Do all image links lead to the appropriate website?	
9	Are all the images and links clearly visible on the page?	
10	Does the Web page work properly in all the tested browsers?	
11	Does the Web page take too long to be loaded fully?	
12	Is the navigation sequences correct through all the Web pages on the site?
